

**Did you know
that Myanmar
has its own unique
measurements?**

Myanmar is one of only three countries in the world not to use the metric system. The country still uses its units of measurement, though you'll find gas measured in gallons and distances in miles. Weight is a bit trickier, with 1 viss (peittha) equal to 1.68 kilograms (3.5 pounds). Confused?

Fret not! Because the local team will un-complicate things for you! Our Burmese team is experienced in dealing with any requests, no matter size, urgencies and mode of transport, being it air- or ocean freight direct out of Myanmar or transiting thru Thailand, Sri Lanka, or Singapore on our well-established multi-modal services. We are here to serve you, and we do it with passion and a can-do attitude at all times! We manage all kinds of industries and specialize in garment logistics, serving some of the world's biggest fashion companies on a regular basis.

Let our dynamic team offer round-the-clock services and creative solutions for all your requirements! Together we deliver.
