Mölnlycke accelerates emissions reductions with Scan Global Logistics' Ocean Biofuel solution

07 Apr, 2025 | Share ↗

With a foundation built on trust, expertise, and shared ambitions, the longstanding partnership between Mölnlycke and Scan Global Logistics (SGL) highlights how sustained collaboration can accelerate the transition to low-carbon logistics. By expanding its use of ocean biofuel, Mölnlycke is reinforcing its commitment to reducing greenhouse gas emissions while optimising supply chain efficiency.

Speaking on the decision to extend the commitment to biofuel, Jörgen Kåreby, Vice President, Global Logistics at Mölnlycke explains:

"We are committed to reducing GHG emissions in alignment with our SBTi targets. Ocean biofuel is a key stepping stone to more advanced alternative fuels replacing traditional fossil fuels in marine shipping. We want to help raise the demand for alternative marine fuels to contribute to decarbonising shipping."

This renewed commitment highlights the increasing role of alternative marine fuels in supporting businesses with ambitious climate targets. By expanding the partnership within biofuel, Mölnlycke aims to drive demand for low-carbon shipping solutions and contribute to the broader adoption of alternative fuels in the industry.

Lowering costs while reducing emissions

With the EU Emissions Trading System (ETS) shaping market dynamics, the use of biofuel helps Mölnlycke optimise costs, as the increasing EU-driven CO2 taxation on ocean freight makes fossil-fuelled transport more expensive. Jörgen Kåreby adds:

"SGL has a good understanding of our flows and of the combined impact of EU ETS and insetting of ocean biofuels on specific flows. We also value the transparency in reporting CO2e savings and the process of third-party review certification."

This reflects a broader industry trend, as companies are not just seeking alternative fuels but also reliable insights, accurate emissions reporting, and a clear path to demonstrating climate action to stakeholders.

A partnership built on transparency and expertise

For Mölnlycke, working with a logistics partner that prioritises transparency and proactive climate solutions is crucial to making informed decisions.

The partnership between Scan Global Logistics and Mölnlycke reinforces the importance of collaboration in tackling climate challenges. Your commitment to transparency in emission tracking allows us to make informed decisions and confidently communicate our sustainability progress to stakeholders, including customers and regulators.

Jörgen Kåreby

Vice President, Global Logistics

Marc Bach Spangsborg Sørensen, Global Head of Program Management at SGL echoes the importance of partnerships as a catalyst for change:

"Collaboration is key to making low-carbon logistics a reality. By working closely with Mölnlycke, we take proactive steps to implement real-world strategies that drive down emissions, enhance efficiency, and set a benchmark for low-carbon logistics. This partnership proves that reducing supply chain emissions is not a future goal – it's happening today."

As businesses navigate evolving regulations, partnerships like this prove that concrete actions, such as adopting alternative fuels and ensuring transparent emissions reporting, lead to tangible reductions in supply chain emissions and long-term business resilience.

About Mölnlycke

Mölnlycke Health Care is a world-leading MedTech company that specialises in innovative solutions for wound care and surgical procedures. Mölnlycke products and solutions are used daily by hospitals, health care providers and patients in over 100 countries around the world. Founded in 1849, Mölnlycke is owned by Investor AB and headquartered in Sweden. www.molnlycke.com

Mölnlycke's vision to become a leader in sustainable healthcare is implemented through the sustainability roadmap 2030, WeCare, which focuses on creating shared value for all stakeholders.
